Security Policy

When paying for an order with a bank card, payment processing (including entering card details) is carried out on a secure page within a processing system that has undergone international certification.

This means that your confidential information (card details, registration data, etc.) is not transferred to the online store. The processing is fully protected, and no one, including our online store, can access the customer's personal or banking information.

When working with card data, the information protection standard developed by the international payment systems Visa and MasterCard, known as the Payment Card Industry Data Security Standard (PCI DSS), is applied. This ensures the secure processing of bank card data.

The technology used for data transmission ensures the security of card transactions through Secure Sockets Layer (SSL), Verified by Visa, Secure Code, and closed banking networks, which provide the highest level of protection.
